

ABBERFIELD tokens

TOKENS

Standard Abberfield tokens, material embossing grade brass, nickel plated.

Abberfield Holdings

Diameter 22.6mm thickness 2.2mm

Abberfield Industries

Diameter 27mm thickness 2.2mm

Abberfield Technology

Diameter 30mm thickness 2.4mm

CUSTOMISED TOKENS

These three sizes of tokens can be embossed with customer specific artwork. This is usually on one side only with the generic TOKEN symbol on the reverse, but some customers have both sides embossed.

SPECIAL TOKENS

Tokens can be embossed in different materials, such as aluminium, steel or bronze.

The plated finished is normally nickel but for ease of recognition can be cadmium, brass or paint finished. These three token diameters can be made in different thicknesses. Different sizes are available although care should be taken to avoid sizes of coins.

PLASTIC TOKENS

These can be moulded to customer's specification.
