

MAINTENANCE & LIFETIME SUPPORT FOR WATER FILLING STATIONS

Preservation of a Tanker Filling Station's long operational life comes from protecting the asset from the ravages of the environment.

Constructed of stainless steel, the cabinet will not rust, but the paint will fail unless protected. Likewise, the electronics will last and last, provided insect infestation does not occur. Insects, spiders, geckos etc. occasionally inhabit warm dry places. They rarely cause damage to the electronics, but they can.

Washing and waxing the cabinet and application of insect repellent surface spray, plus similar insect control measures are recommended. Add dust and dirt eradication, cleaning and oiling of locks and buttons, plus a 50 item check list and then the maintenance plan is complete.

With over 150 Water Filling Stations installed, maintenance by Abberfield Technology becomes commercially viable.

Breakdown support has always been available, with Abberfield's mobile Office and Workshop, now supported by a separate mobile Maintenance vehicle to support Abberfield's Filling Station customers.

On a cost contribution basis the maintenance team can visit and preserve customer's assets and carry out simple repairs. Also they can report to Abberfield's management if a need exists for the Service team to visit site.

Both the Maintenance team and the Service team would be in converted mobile homes, able to go anywhere, at any time.

Maintenance can be on an "as requested" basis, or can be by formalised schedule arrangement.
