TICKETING
MACHINE**

SITUATION

**KUALA LUMPUR
MALAYSIA**

SYSTEM

The intention was to provide change for passengers purchasing bus tickets at the bus stop, before entering the bus. A sample machine was supplied to the customer for evaluation, following which, four machines were produced for the initial trials. However the trials did not proceed and the project awaits an opportunity for commercial implementation.

FARE COLLECTION SYSTEM

There are 3 ticket prices on this ticketing machine. The user presses the corresponding button to select the ticket type required. The fee required is displayed, and notes or coins are inserted. When the fee is inserted or exceeded, the pre-encoded magnetic ticket is issued, and change is given if necessary.

A Management Information System provides audit control and historic details of machine use.
